

1064 nm In-line Polarizer (ILP Series)

Rev 11

The 1064 nm In-line Polarizer is designed to pass light with one specific polarization while blocking the other polarization. It can be used to convert non-polarized light into polarized light with high extinction ratio. It can also be used to enhance the extinction ratio of signals with its excellent polarization properties. It is ideal for high speed communication systems and test instrumentations where high polarization extinction ratio is required.
